Log No.	Asset (name, image, website)	Source Link	Rationale/Purpose	Date
1.	W3Schools Template	https://www.w3schools.com/w3css/tryit.asp?filename=tryw3css_templates_black&stacked=h	I've decided to use this template as a means to start off my project as it is well designed with it having visually appealing and responsive layout. In addition, I can also save a lot of time as the project is just 30 hours, so building a website from scratch will seem redundant, when I can edit the source code and make tweaks that align with the aesthetic of my website.	24/03/25

<u>3.</u>	<pre> from flask import Flask app = Flask(__name__) @app.route("/") Routing: @app.route('/') def index(): return 'Index Page' @app.route('/hello') def hello(): return 'Hello, World' </pre>	https://flask.palletsprojects.com/en/stable/quickstart/#a-minimal-application	To allow the HTML templates to be rendered via flask. This code will also allow the user to reference or route any other pages from a particular page	<u>24/03/25</u>
	<pre> from flask import request @app.route('/login', </pre>		POST will be used to send data to a server to create/update a resource(this should allow the developer to render the HTML pages).	

	<pre> methods=['GET' , 'POST']) def login(): if request.method == 'POST': return do_the_login() else: return show_the_login _form() </pre>
